

Submitter: Saddle Christensen

On Behalf Of:

Committee: House Committee On Economic Development, Small Business, and Trade

Measure, Appointment or Topic: SB1548

This measure has absolutely NO benefit for the consumer or the cannabis industry as a whole. Why add more packaging when the edibles ALREADY have to score so, you can take a small dose if needed. I've worked in the industry for years as a metro manager for a couple dispensaries. We are very consistent at keeping our shelves stocked at all the stores. However, when a customer's preferred product is out, they ask about it everyday until it comes back in stock. Phone calls to see if it's in stock, or just coming in the store optimistically only to leave empty handed. And this is with an inventory manager who is constantly talking to vendors & placing orders so our shelves stay stocked. Now imagine 50% of your edible inventory is now gone, because it needs more plastic packaging. Those customers are going to be pissed if they have to wait MONTHS for new packaging to come in. And for what? More plastic to ruin our environment & planet. There is no benefit. NONE.
