

Submitter: David Wall  
On Behalf Of: Mr Oregon OPPOSES HB 4031 A  
Committee: Senate Committee On Energy and Environment  
Measure, Appointment or Topic: HB4031

I OPPOSE [HB 4031 A].

President Trump rightfully and with great leadership is in the act of killing off Federal subsidies for the solar and wind power fiasco via Directing the Treasury to stop issuing Federal tax credits to the aforementioned.

One easy and quick way to increase reasonably priced and sustainable electrical power is through the construction and operation of natural gas fired co-generation power plants, until nuclear fusion becomes the industry standard.

To those whiners that claim, fossil fuels are destroying the planet-rally against residential housing projects destroying destroying valuable, irreplaceable farmlands but also polluting the air and water wherever they are built.

In McMinnville, City Officials allowed several hundred Oregon White Oak Trees cut down as part of a disgusting residential housing project."

David S. Wall

Mr. Oregon Concur and says, "Are solar panels, batteries and wind mills (aka 'Bird Choppers} recyclable?"
