

February 25, 2026

Hello,

I am writing in opposition to Senate Bill 1586, the “data centers on farmland bill.” The reasons I’m opposing this bill are the following:

- **No local public process:** Normally, decisions like this have multiple public meetings, hundreds of pages of analysis on what the net cost would be, and community consensus on what they think economic development is. None of that has happened here. Everyone expected the land to remain rural until 2065 and local farmers and businesses alike had been making decisions based on that fact. The only ones who want this expansion are the landowners inside the 1700 acres and their lobbyist who would make hundreds of millions of dollars from the sale of this land.
- **Data Centers:** The bill has a loophole that would allow almost unlimited data centers as long as they’re “attached” to another business. Data centers don’t produce jobs or tax revenue. And Hillsboro has plenty of land for them if that’s how the city grows. The pollution from data centers cannot be ignored. During power outages, data centers have enough emergency engines that could power a small city. Many of these engines do not have pollution controls. Hillsboro already has air quality issues because of wood stoves and the airport. Data centers would only make the air quality worse.
- **Land:** We have plenty of land inside of our urban growth boundaries already for industries including high-tech. There’s over 10,000 acres of industrial land around the state and 500 just next door to this land in Hillsboro. Hillsboro has had 15 years to attract high-job industries but instead is filling it rapidly with data centers and warehouses. The state does not even have an industrial lands inventory. We should know what we have and invest in those lands so we can minimize our costs and the impacts on surrounding farmland.
- **Expensive:** Taxpayers would bear the costs of this sprawl. Hillsboro hasn’t shown detailed figures, but even their document shows they won’t break even for 34 years. While we’ve heard that the bill may be amended to remove a provision that would double the tax break to businesses including data centers, another bill this session would extend a similar tax break. Other states are cutting or reassessing their tax breaks to these industries. We should not be using our tax dollars to incentivize low-job industries that waste our energy and natural resources and are profitable on their own – especially when we’re in a budget crisis. Offering tax breaks to these huge, profitable companies is ridiculous, especially since taxpayers will have to make up the difference.
- **Farmland:** Taking this land irreparably harms another industry – agriculture. Agriculture depends on soil, and this land has some of the best in the world. Class 1 soils only make up about 2% of the soils in the Willamette River Basin and are the very best soils on earth. These are Class 1 and Class 2 soils and it is essential that we protect them for

agricultural uses. Further, losing this large section of farmland that connects Washington county's farm country together could irreparably harm the entire industry. Food is more important than data centers! What will people eat if you continue to take away farm land?

- **Poor Process:** I am submitting this testimony to you with the understanding that the bill may be amended between the opening of testimony and the hearing date. This is exceptionally poor process. If the legislature wants to receive public input on legislation, it needs to let the public know what they are commenting on. But even if the bill is amended to not include a tax abatement, we understand that HB 4084 would extend the same tax abatement - potentially indefinitely. And even if the bill limits the acreage in Hillsboro's UGB to 373 and in the urban reserve to the remaining 1700 acres, Hillsboro has never proven a need for more land.

PLEASE DO NOT VOTE FOR SENATE BILL 1586. IT IS JUST WRONG!

Thank you,
